Features & Benefits

Sophisticated Capabilities Minus Complexity
The 3Com® NBX® 2102PE Business Phone offers sophisticated capabilities to meet the needs of today's businesses: full-duplex speakerphone for outstanding audio quality, multiline display for ease of use, and 10/100 Ethernet connectivity. With support for Session Initiation Protocol (SIP) or native 3Com NBX call control, the phone optimizes voice communications now and offers investment assurance for the future.

Commonly used features such as Speaker, Redial, Conference, Transfer, and Hold are easily accessed from oversized buttons. Dozens of additional capabilities are programmable so the phone can be tailored to meet individual requirements. And an intuitive display provides instant access to the location's user directory and call logs, helping workers keep in-touch with each other and with customers.

The NBX 2102PE Business Phone can be easily deployed across even the largest location by taking advantage of its built-in support for Power over Ethernet. In addition, the phone comes with a built-in switch port to allow a desktop computer to share the same wiring, eliminating the cost and complexity of a second cable run to each desktop.

● Delivers the versatility of 3Com NBX H3 or SIP call control support

● Provides the flexibility of 12 programmable buttons with lights and 6 programmable without lights

● Offers the convenience of 10 fixed feature buttons including Speaker, Redial, Conference, Transfer, Hold, Voice Mail, Forward to Mail, Hands-Free, Mute, and two Volume controls

● Makes access to user directories and call logs intuitive with a 2x24 character display

● Enables user-interaction with display capabilities via three context-sensitive softkeys

● Ensures the audio performance of a high-quality, full-duplex speakerphone

● Facilitates desktop use with a multi-position stand

● Allows one-wire connectivity between the phone and a PC with a 10/100 switched Ethernet dual-port

● Simplifies deployments by supporting IEEE 802.3af standard Power over Ethernet
